Abstracts

Emollient esters are formed by esterification process, which result into lighter emollients. Such emollient esters occupy properties like smooth spreading, less oiliness, etc. Emollients are ingredients that retain the natural moisture of the skin from loss. Esters provide slip, oily feel, and soaping of to the products. Hence, emollient esters are majorly used in personal care products as moisturizers, plasticizers and tactile modifiers.

Lipstick, body lotions, oils, face creams, etc. are the example of emollient esters based products in personal care segment. Emollient esters enhance the spreadability and smoothness of these products by controlling the dehydration of the skin. Emollient esters help maintain skin's softness and plasticity. Emollients exist in all oils such as sesame, almond, olive oils and their derivatives.
