Abstracts

Long term heavy intake of alcohol results in Alcoholic Hepatitis, a stage in Hepatitis liver disease. It is associated with fatty liver, fibrosis and can also lead to cirrhosis. Typically, the patients are administered with corticosteroids.

Around 20 companies and universities are focusing on developing treatment options for Alcoholic Hepatitis.

To assist researchers and business development managers, VPA Research has come up with a comprehensive report on Alcoholic Hepatitis pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/fast track/other designations, drug class are provided for each Alcoholic Hepatitis pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Alcoholic Hepatitis pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
