Abstracts

Atrial Fibrillation or AFib is estimated to affect around 30 million worldwide and is currently regarded as an important research area. With increasing aged population (65+) across several countries, Atrial fibrillation is observed to be one of the leading causes of strokes with strong increase in hospitalization rates. Over 30 companies and universities are focusing on developing treatment options for Atrial Fibrillation.

To assist researchers and business development managers, VPA Research has come up with a comprehensive report on Atrial Fibrillation pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/fast track/other designations, drug class are provided for each Atrial Fibrillation pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Atrial Fibrillation pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
