Abstracts

Behcet's disease or Behcet's syndrome is a chronic and systemic inflammatory and auto-immune disorder that involves aphthous stomatitis, skin manifestations, eye inflammation and genital ulcers. The disease of unknown aetiology is more prevalent in Asian and Middle East countries compared to the prevalence in Americas. The rare condition is characterized by a relapsing remitting course, which affects multiple organs. Biologic therapy is considered as the most beneficial for disease control.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Behcet'S Disease pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Behcet'S Disease pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Behcet'S Disease pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
