## Abstracts

Cardiac Dysrhythmia refers to abnormal rate of heart beats and affects around 6 million people in the US alone. More than 20% of these patients are hospitalized and 8-9% witness death. The pace of heart beat is irregular, or either more than the normal range (tachycardia) or slower than normal (bradycardia). Primary factors contributing to the Cardiac Dysrhythmia condition include diabetes, smoking, stress while symptoms include palpitations, short of breath etc.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Cardiac Dysrhythmia pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Cardiac Dysrhythmia pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Cardiac Dysrhythmia pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
