Abstracts

Cerebral ischemia or Brain ischemia condition refers to inadequate blood supply to the brain to enable it to cater its regular metabolic requirements. This can result in brain tissue death, ischemic stroke, hemorrhage, resulting in loss of movement, speech and vision difficulties, impact on memory, weakness, unconsciousness etc. Depending on the affected area in the brain, Cerebral Ischemia is classified as focal (certain area in the brain) and global (large portion of the brain). Analgesics, Anti- platelet drugs and BP controlling drugs are typically administered.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Cerebral Ischemia pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Cerebral Ischemia pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Cerebral Ischemia pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
