Abstracts

Chronic heart disease is primarily caused by coronary heart disease and refers to weak heart muscles that fail to pump sufficient blood to the body parts. The ventricles grow thicker in size, failing to contract sufficiently to pump the blood. An estimated 5 million to 6 million people suffer from chronic heart failure in the US. Aged population is more susceptible to the disease with prevalence of 100 in 1000 people aged above 70 worldwide.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Chronic Heart Failure pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Chronic Heart Failure pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Chronic Heart Failure pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
