## Abstracts

Colitis is a serious inflammation observed in large intestine. Frequent diarrhea and abdominal pain are the main symptoms of the disease. Symptoms tend to appear from few weeks to several years.

Over 40 companies and universities are focusing on developing treatment options for Colitis.

To assist investigators and funding and regulatory organizations, VPA Research has come up with a comprehensive report on Colitis pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/fast track/other designations, drug class are provided for each Colitis pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Colitis pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
