Abstracts

Thrombosis refers to a serious heart condition in which arteries or veins are blocked because of blood clot in the blood vessel. Based on the location of clot, it is classified as Venous and Arterial Thromboembolism.

Venous Thromboembolism (VTE) is classified further as deep vein thrombosis (DVT) and pulmonary embolism (PE). In DVT, the clot in veins lies deep inside muscled while in PE, the clot is nearby lungs.

An estimated 10 million population is affected by Thromobisis worldwide every year.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Deep Vein Thrombosis pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Deep Vein Thrombosis pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Deep

Vein Thrombosis pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
