Abstracts

Cardiac ischemia-reperfusion injury (IRI) is a heart related condition in which blood supply is restored to the tissue after some period of ischemia or absence of oxygen supply. The new supply causes additional complications such as inflammation, innate immunity, and oxidative stress instead of restoring regular function.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Ischemia-Reperfusion Injury pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Ischemia-Reperfusion Injury pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Ischemia-Reperfusion Injury pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
