## **Abstracts**

Left Ventricular dysfunction can occur as a result of several cardiac disorders. It can either be systolic or diastolic. Further, if the dysfunction is restricted to a small area, it is referred to as coronary artery disease and alternatively if it affects entire ventricle, it is referred to as total left ventricular dysfunction. The disease can occur without any explicit symptoms prior to heart failure.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Left Ventricular Dysfunction pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Left Ventricular Dysfunction pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Left Ventricular Dysfunction pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
