## Abstracts

With an estimated \$2 billion market value, the Oral Mucositis disease pipeline presents strong opportunities for development of treatment options. Absence of preventive or curative treatment for the Oral Mucositis is encouraging investigators in major companies to focus on pipeline. Further, an increasing trend towards grant announcements is being observed in the segment.

The disease occurs primarily as a result of damage to epithelium by chemoradiation.

Over 30 companies and universities are focusing on developing treatment options for Oral Mucositis.

To assist investigators and funding and regulatory organizations, VPA Research has come up with a comprehensive report on Oral Mucositis pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/fast track/other designations, drug class are provided for each Oral Mucositis pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Oral Mucositis pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into

the type of drugs being developed and the stages of development.
