Abstracts

With an estimated prevalence of around 20 million pancreatitis cases worldwide, it is one of the most devastating gastrointestinal diseases. On the basis of duration of the disease existence, it is typically classified as acute pancreatitis and chronic pancreatitis. Of this, acute pancreatitis lasts from few days to months and can occur suddenly. On the other hand, the chronic pancreatitis develops over years and can last for few years.

Around 25 companies and universities are focusing on developing treatment options for Pancreatitis.

To assist investigators and funding and regulatory organizations, VPA Research has come up with a comprehensive report on Pancreatitis pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/fast track/other designations, drug class are provided for each Pancreatitis pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Pancreatitis pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
