Abstracts

Peripheral Arterial Disease is a condition in which plaque or fatty deposits build up in the arteries which supply blood to the leg muscles. It can cause serious implications such as myocardial infarction, vascular dementia, stroke etc. An estimated 0.2 billion population is affected worldwide and the market size of Peripheral Arterial Disease (PAD) is estimated to be around \$4.5 billion.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Peripheral Arterial Disease (PAD) pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Peripheral Arterial Disease (PAD) pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Peripheral Arterial Disease (PAD) pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of

development.
