Abstracts

Septic shock is a progression of sepsis condition and is life threatening in most cases. Infection which has spread to different body parts through blood is referred to as sepsis. The blood pressure in the body drops suddenly, which can result in death. Sepsis progresses to severe sepsis and then to septic shock. Symptoms include breath shortage, decline in urine volume, platelet count decrease and irregular heart beat. An estimated 1.5 million people are affected in the US per annum.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Septic Shock pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Septic Shock pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Septic Shock pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
