## Abstracts

Short Bowel Syndrome is a rare gastrointestinal disease with a prevalence rate of 4 per million. It is typically categorized into three stages- acute, adaptive and maintenance. The condition occurs following extensive intestinal resection.

Over 15 companies and universities are focusing on developing treatment options for Short Bowel Syndrome.

To assist investigators and funding and regulatory organizations, VPA Research has come up with a comprehensive report on Short Bowel Syndrome pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/fast track/other designations, drug class are provided for each Short Bowel Syndrome pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Short Bowel Syndrome pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
