Abstracts

Sickle cell disease (SCD) is a group of diseases occurring due to abnormal hemoglobin, which deforms the RBCs into sickle shape, which restricts them from free flow of blood, resulting in extreme pain and ultimately can lead to death. It is a common genetic disorder, which affects around 5 million population worldwide. It is caused by a single mutation in the beta-globin gene. African and Asian population is more susceptible to the disease. In the US alone, Sickle cell disease market value is estimated to be around \$1.2 billion.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Sickle Cell Disease Or Sickle Cell Anemia pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Sickle Cell Disease Or Sickle Cell Anemia pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Sickle Cell Disease Or Sickle Cell Anemia pipeline studies. The products under development

are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
