Abstracts

Thrombosis refers to a blood vessel related condition in which a clot inside the arteries or veins affects the flow from and to the heart of the patient. Based on the area of formation of clot, thrombosis is classified as Venous Thromboembolism (VTE) and Arterial Thromboembolism.

In Europe alone, over 0.7 million people are given anticoagulant treatment for prevention or treating thrombosis.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Thromboembolism pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Thromboembolism pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Thromboembolism pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
