## **Abstracts**

Vaso-occlusive crisis (VOCs) is one of the most common complications associated with Sickle cell disease (SCD). The disease occurs due to abnormal hemoglobin and is a painful and deadly situation. The cells that are affected by Vaso occlusive crisis deform into sickle shape that restricts them from free flow of blood, resulting in extreme pain and ultimately can lead to death. The disease is estimated to value at \$356 million for pain management alone.

To assist researchers, investors and business development managers, VPA Research has come up with a comprehensive report on Vaso-Occlusive Crisis pipeline. The report provides insights into different therapeutic candidates in preclinical, research, discovery, NDA/IND, pre registration, phase 1, phase 2, and phase 3 trials). Drugs under development directly and through combination with other drugs are also included.

Current status, developmental phase, participating companies and entities, recent developments, orphan drug/ fast track/ other designations, drug class are provided for each Vaso-Occlusive Crisis pipeline product. Mechanism of Action and the target area of the pipeline product are also provided. Further, clinical and preclinical trials along with results of the trials are also included in the report.

In addition to complete details of each product, the report provides key trends in Vaso-Occlusive Crisis pipeline studies. The products under development are categorized according to their development phase, mechanism and company to provide detailed insights into the type of drugs being developed and the stages of development.
