## **Abstracts**

The ongoing clinical trial research report- “2019 Exercise-Induced Bronchoconstriction (EBI) Ongoing Clinical Trials Study” analyzes the current scenario of all active Exercise-Induced Bronchoconstriction (EBI) trials across the world. The report presents top level analysis of global Exercise-Induced Bronchoconstriction (EBI) clinical trials across countries, companies and universities. It is designed to provide clear understanding into the Exercise-Induced Bronchoconstriction (EBI) trials landscape to assist users for effective long term strategy formulation to beat competition.

The report covers a key snapshot of ongoing trial count, average enrollment per trial across countries.

It also segments the Exercise-Induced Bronchoconstriction (EBI) clinical trials by-

Region (Asia Pacific, Europe, Middle East Africa and Americas)

Countries

Trial Phase

Current Trial Status (Recruiting, Active, Planned, Active but Completed Recruiting, Not Yet Recruiting etc)

Type of the trial (Interventional, Observational)

Sponsor Type (Companies, Universities, Government Bodies etc)

Enrollment across types, sponsor types, geographies, current status and phases

The report also identifies the potential drug candidates under development for treatment of Exercise-Induced Bronchoconstriction (EBI) on the basis of intervention type ongoing Exercise-Induced Bronchoconstriction (EBI) trials.

The research work is prepared through extensive and continuous research on Exercise-Induced Bronchoconstriction (EBI) trials from over 150 sources including company websites, conferences and presentations, scientific journals, country wise and global clinical trial registries, news, health and science departments among others.
