Abstracts

The 2020 Cerebral Palsy pipeline report presents a comprehensive overview of the research and development of Cerebral Palsy drug candidates. It presents drugs in development that could potentially reach the market in the next 5 to 10 years: Four drugs in Pre-clinical phase, and two drugs in Phase 3

As of February 2020, the Cerebral Palsy pipeline remains robust with 7 therapeutic candidates under development. An increasing number of companies are actively participating in the development of Cerebral Palsy treatment. Diverse types of targeted therapies are being explored through clinical trials including SNAP-25 (synaptosomal associated protein) inhibitor; Vesicular monoamine transporter 2 inhibitors.

The report provides complete details of pipeline drugs including the development phase, mechanism of action, companies involved, clinical trial developments, molecule type, and other details. Further, the report also provides Cerebral Palsy drug development history, latest news, and other developments.

It assists companies, governments, investors and research organizations to understand the current status in 2020 and possible development in the next 10 years. Further, it enables readers to track new companies in the market and their developments. The product portfolio of different companies and their growth strategies are also detailed in the report.
