## **Abstracts**

The 2020 Dental Pain pipeline report presents a comprehensive overview of the research and development of Dental Pain drug candidates. It presents drugs in development that could potentially reach the market in the next 5 to 10 years: One drug in Research phase, two drugs in Phase 2 and two drugs in Phase 3

As of February 2020, the Dental Pain pipeline remains robust with 5 therapeutic candidates under development. An increasing number of companies are actively participating in the development of Dental Pain treatment. Diverse types of targeted therapies are being explored through clinical trials including Adrenergic uptake inhibitors; CACNA2D1 protein modulators; calcitonin gene related peptide (CGRP) receptor inhibitor; Cyclo-oxygenase 2 inhibitors; Nav1.7 voltage-gated sodium channel inhibitors; Opioid mu receptor agonists; Serotonin uptake inhibitors; Sodium channel antagonists.

The report provides complete details of pipeline drugs including the development phase, mechanism of action, companies involved, clinical trial developments, molecule type, and other details. Further, the report also provides Dental Pain drug development history, latest news, and other developments.

It assists companies, governments, investors and research organizations to understand the current status in 2020 and possible development in the next 10 years. Further, it enables readers to track new companies in the market and their developments. The product portfolio of different companies and their growth strategies are also detailed in the report.
