Abstracts

The global Animal Hormone Therapy market size is poised to register 5.8% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Animal Hormone Therapy market across By Application (Growth Promoters, Performance Enhancers, Others), By Animal (Companion Animals, Livestock)

With the increasing demand for reproductive technologies and growth promoters to optimize livestock performance and enhance breeding efficiency, there is a rising need for hormone therapies that regulate reproductive cycles and stimulate growth and development in animals. Market growth is driven by factors such as expanding global demand for animal-derived products, the growing trend towards intensive animal farming and genetic selection, and technological advancements in hormone formulation and delivery systems. Additionally, the expanding applications of animal hormone therapy in dairy farming, poultry production, and aquaculture, as well as the growing adoption of artificial insemination and embryo transfer techniques, contribute to market expansion. Further, the development of hormone-based feed additives and implantable devices for sustained release, the integration of precision farming technologies and data analytics for herd management, and the emphasis on animal welfare and food safety standards are expected to further propel market growth in the coming years.
