Abstracts

The global Animal Intestinal Health market size is poised to register 8.76% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Animal Intestinal Health market By Additive (Probiotics, Prebiotics, Phytogenics, Immunostimulants), By Livestock (Poultry, Ruminants, Swine, Aquaculture, Others), By Form (Dry, Liquid), By Function (Metabolism, Weight Gain, Nutrient Digestion, Disease Prevention, Bone and Joint Health), By Source (Microbial, Plant Based).

The future of animal intestinal health is driven by innovations in feed additives, probiotics, and management practices that promote gut health and immune function in livestock and companion animals. Key trends include the development of prebiotics and synbiotics to modulate the composition and activity of the gut microbiota and enhance nutrient absorption and feed efficiency, integration of gut health biomarkers and diagnostic tools for early detection of intestinal disorders and subclinical infections, and customization of nutritional strategies and housing environments to support digestive health and stress resilience in animals raised under intensive production systems.

These advancements improve animal welfare and performance, reducing the need for antibiotic usage and promoting sustainable agriculture practices in the livestock industry..
