## **Abstracts**

The global Bifurcation Lesions market size is poised to register 6.46% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Bifurcation Lesions market across By Application (Peripheral Vascular, Coronary Vascular), By Type (One-Stent, Two-Stent).

The bifurcation lesions market is witnessing rapid growth due to increasing prevalence of coronary artery disease and advancements in interventional cardiology techniques. Bifurcation lesions, characterized by blockages or narrowing at the branching points of coronary arteries, pose challenges for cardiologists during percutaneous coronary interventions (PCIs) and stent placement procedures. With a focus on improving procedural outcomes and reducing complications, interventional cardiologists and medical device manufacturers are developing specialized devices, such as bifurcation stents, balloons, and guidewires, to address the unique anatomical and technical requirements of treating bifurcation lesions, enabling safer and more effective treatment options for patients with complex coronary artery disease.
