Abstracts

The global Brucellosis Vaccine market size is poised to register 5.73% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Brucellosis Vaccine market across By Vaccine Type (DNA Vaccine, Subunit Vaccine, Vector Vaccine, Recombinant Vaccine), By Application (Cattle, Sheep & Goat, Others), By End-user (Veterinary Hospitals & Clinics, Animal Care Centers, Others).

The brucellosis vaccine market is poised for substantial growth, driven by various factors in 2024 and beyond. Brucellosis is a zoonotic infectious disease caused by bacteria belonging to the genus *Brucella*, posing significant threats to human and animal health. Market growth is fueled by the increasing prevalence of brucellosis in livestock populations, rising demand for food safety and animal welfare, and growing government initiatives for disease control and eradication. Moreover, advancements in vaccine technologies, such as live attenuated and subunit vaccines, are driving the development of safe, effective, and affordable brucellosis vaccines, driving market adoption. Additionally, strategic collaborations between vaccine manufacturers, veterinary agencies, and research institutions are driving innovation, standardization, and market access efforts, shaping industry trends and competitiveness. Furthermore, the growing awareness about zoonotic diseases, biosecurity measures, and vaccination

programs is propelling market expansion and sustainability.
