Abstracts

The global Cervical Disc Prosthesis market size is poised to register 11.04% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Cervical Disc Prosthesis market across By Disc (Metal-On-Polymer (M-o-P), Metal on Metal (M-o-M)), By Indication (Myelopathy, Radiculopathy, Neck Pain), By Material (Stainless Steel, Cobalt Chromium, Titanium, Others), By End-User (Hospitals, Orthopedic and Trauma Centers, Others).

The cervical disc prosthesis market is witnessing significant growth, driven by various factors in 2024 and beyond. Cervical disc prostheses are designed to replace damaged intervertebral discs in the cervical spine, offering an alternative to traditional fusion surgery for patients with degenerative disc disease and cervical radiculopathy. Market growth is fueled by advancements in implant design, materials, and surgical techniques, leading to improved patient outcomes and reduced postoperative complications. Moreover, the growing preference for motion-preserving spinal implants over fusion surgery, coupled with the rising incidence of cervical spine disorders, is driving market expansion. Additionally, increasing adoption of minimally invasive surgical approaches

for cervical disc replacement procedures is contributing to the growth of the market. Furthermore, strategic collaborations between medical device companies, orthopedic surgeons, and research institutions are driving innovation and shaping industry trends in the cervical disc prosthesis market.
