## Abstracts

The global Chronic Myelogenous Leukemia Therapeutics market size is poised to register 5.63% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Chronic Myelogenous Leukemia Therapeutics market By Product (Targeted Therapy, Chemotherapy, Immunotherapy).

The future of chronic myelogenous leukemia (CML) therapeutics is undergoing a transformative phase driven by precision medicine, targeted therapies, and immunotherapy approaches aimed at achieving deep molecular responses, treatment-free remission, and long-term disease control in CML patients. Key trends include the development of tyrosine kinase inhibitors (TKIs) with improved efficacy, safety profiles, and resistance profiles, offering frontline and second-line treatment options tailored to individual patient characteristics, disease stage, and treatment history. Additionally, the integration of minimal residual disease (MRD) monitoring, molecular testing, and treatment response assessment enables early detection of treatment failure, timely switch of therapy, and optimization of treatment strategies to achieve sustained molecular responses and prevent disease progression. Moreover, the customization of treatment duration, dose optimization, and combination regimens based on patient-specific factors and treatment goals drives personalized approaches and optimization of therapeutic outcomes, ensuring tailored and patient-centered care for individuals with CML. Furthermore, the exploration of immunotherapeutic approaches, such as chimeric antigen receptor (CAR) T-cell therapy, natural killer (NK) cell therapy, and immune

checkpoint inhibitors, offers new avenues for overcoming treatment resistance, eradicating residual leukemia cells, and achieving durable remissions in refractory or relapsed CML patients. Overall, these advancements in CML therapeutics offer hope for improved survival, treatment outcomes, and quality of life for patients living with this chronic hematologic malignancy, underscoring the importance of continued research and innovation in the field of hematology-oncology..
