Abstracts

The global CINV Treatment market size is poised to register 6.1% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global CINV Treatment market across By Drug (5-HT3 inhibitors, NK1 inhibitors, Others), By End-User (Hospitals, Specialty Clinics, Others)

With the increasing use of chemotherapy agents in cancer treatment and the need for effective antiemetic regimens that prevent and manage CINV, there is a rising demand for CINV therapies that offer improved efficacy, safety, and patient compliance. Market growth is driven by factors such as expanding cancer incidence and survival rates, rising adoption of highly emetogenic chemotherapy (HEC) and moderately emetogenic chemotherapy (MEC) regimens, and advancements in antiemetic drug formulations and delivery systems. Additionally, the expanding applications of combination antiemetic protocols, prophylactic treatment algorithms, and rescue therapies, as well as the development of novel receptor antagonists and neurokinin inhibitors, contribute to market expansion. Further, the emphasis on individualized antiemetic prophylaxis, patient education, and supportive care guidelines, along with efforts to address CINV-related disparities and treatment barriers, is expected to further propel market growth in the coming years.
