Abstracts

The global Compound Management market size is poised to register 16.01% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Compound Management market across By Type (Product, Service), By Sample Type (Chemical compound, Bio samples), By Application (Drug Discovery, Gene Synthesis, Bio Banking, Others), By End-User (Pharmaceutical, Biopharmaceutical, Contract Research Organizations, Others).

The compound management market is witnessing steady growth due to increasing demand for high-throughput screening (HTS) technologies, advancements in drug discovery automation, and rising outsourcing of compound management services by pharmaceutical and biotechnology companies. Compound management encompasses the storage, handling, and distribution of chemical compounds, small molecules, and biological samples used in drug discovery, high-content screening, and biochemical assays for drug development research. With a focus on efficiency and productivity, drug discovery laboratories, academic research centers, and contract research organizations (CROs) are implementing automated compound storage systems, sample management

software, and integrated logistics solutions to optimize compound libraries, track sample inventories, and streamline screening workflows, accelerating the drug discovery process and enhancing research productivity in the pharmaceutical industry.
