COVID-19 Pipeline Analysis

The September 2020 updated COVID-19 report identifies 440 companies investing in therapy and vaccination products. Around 24 companies have advanced their products into Phase 3 and around 15 companies are in Phase 2/3. Pipeline candidates of 114 companies are in phase 1 or phase 2. 23 companies are in IND/CTA filed phase.

The early development COVID-19 product pipeline is much stronger with 135 companies investing their R&D resources in preclinical COVID, 127 companies developing Research phase products.

The research report is a comprehensive market research on COVID-19 pipeline products detailing the companies, drug and vaccine candidates, their current status, historical developments and other progress.

The COVID pandemic is resulting in significant health and economic impact on individuals and businesses across the world. Accordingly, companies like Inovio, Pfizer, Johnson and Johnson, Novavax are forming joint ventures, GlaxoSmithKline is extending access to vaccine adjuvant platform, and Sanofi is sharing its expertise with BARDA among others.

Following the release of SARS-CoV-2 genome sequence, majority of companies ranging from severe acute respiratory syndrome (SARS) and Middle East Respiratory Syndrome (MERS) are focusing on vaccine candidates for COVID-19.

COVID-19 Clinical Trials Analysis

The section presents a comprehensive 1800 page analysis on all clinical trials across 96 countries worldwide. The report provides phase wise analysis, region wise clinical trials, trials sponsored directly by companies and through universities, drugs under development, trials in emerging economies and developed countries, and subjects enrolled across phases, geographies, companies, trial status, trial types and countries.

During the 2019 to August 2020 observation period, 1194 COVID-19 trials have been initiated and an additional 503 clinical trials are planned to commence. Of the total 1697 trials studied in the research, 726 trials are in Phase 2, 549 trials are in Phase 3, 220 trials in Phase 0 and Phase 1, and 183 trials in Phase 4. In terms of enrollment, 62% of subjects are recruited/planned for Phase 3.

Around 84% of trials are recruiting or planning to recruit subjects for their pipeline product development. Over 21% of trials are directly sponsored by pharmaceutical companies with the remaining 79% being sponsored indirectly by companies or sponsored by institutions.

Among countries, the US stood the largest market worldwide, accounting for 441 clinical trials. Among economy types, advanced and emerging economies share an almost equal volume of trials with the former accounting for 53% of trial count.

Overall, during the period under consideration, new clinical trial count has been steadily increasing. Further, with robust market outlook, the number of clinical trials and enrolment is also expected to increase steadily through 2022.
