Abstracts

The global Dementia Drugs market size is poised to register 8.9% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Dementia Drugs market across By Indication (Lewy Body Dementia, Parkinsons Disease Dementia, Alzheimers Disease, Vascular Dementia, Others), By Drug Class (Cholinesterase Inhibitors, NMDA Antagonists, Others), By Distribution Channel (Retail Pharmacies, Hospital Pharmacies, Online Pharmacies)

With the increasing prevalence of neurodegenerative disorders such as Alzheimer's disease and vascular dementia and the growing burden of cognitive impairment and dementia-related disabilities in aging populations worldwide, there is a rising demand for pharmacological therapies that target disease-modifying pathways and symptomatic relief mechanisms, offering potential benefits in slowing disease progression and improving cognitive function and quality of life for patients with dementia. Market growth is driven by factors such as expanding aging population, rising healthcare expenditure on neurological disorders, and advancements in neurobiology and drug discovery approaches for dementia treatment. Additionally, the expanding pipeline of novel drug

candidates targeting amyloid-beta, tau protein, and neurotransmitter systems implicated in dementia pathogenesis, as well as the development of combination therapies and precision medicine approaches based on biomarker profiling and genetic risk stratification, contribute to market expansion. Further, the emphasis on early diagnosis, multidomain interventions, and non-pharmacological strategies for dementia management and caregiver support, along with efforts to enhance drug safety and efficacy through innovative formulation technologies and clinical trial design methodologies, is expected to further propel market growth in the coming years.
