## **Abstracts**

The global Dementia and Movement Disorder Treatment market size is poised to register 7.01% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Dementia and Movement Disorder Treatment market By Application (Movement disorders, Progressive dementia, Progressive dementia with neurological abnormality (PDNA)), By Drug Class (MAO inhibitors, Acetylcholinesterase inhibitors, Glutamate inhibitors, Others).

The future of dementia and movement disorder treatment is characterized by a multifaceted approach encompassing pharmacological interventions, lifestyle modifications, and holistic care strategies aimed at improving cognitive function, mobility, and quality of life for patients with neurodegenerative conditions such as Alzheimer's disease, Parkinson's disease, and related disorders. Key trends shaping this market include the development of disease-modifying therapies targeting specific pathophysiological mechanisms underlying dementia and movement disorders, such as beta-amyloid and tau protein aggregation, alpha-synuclein pathology, and neuroinflammation, with the aim of slowing disease progression and preserving

neuronal integrity. Moreover, there is a trend towards personalized medicine approaches that use biomarkers, genetic profiling, and neuroimaging techniques to stratify patients based on disease subtype, severity, and treatment response, enabling tailored therapeutic interventions and precision medicine strategies. Additionally, there is a growing emphasis on non-pharmacological interventions, including cognitive rehabilitation, physical therapy, occupational therapy, and psychosocial support programs, that address the multifaceted needs of patients and caregivers, enhance functional independence, and promote overall well-being in individuals living with dementia and movement disorders..
