## Abstracts

The global Dental Restoration market size is poised to register 9.17% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Dental Restoration market By Material (Dental Amalgams, Resin Based Composites, Glass Ionomers, Dental Ceramics, Others), By End-User (Hospitals, Dental Clinics, Others).

The future of dental restoration is being shaped by advancements in materials science, digital technology, and minimally invasive techniques aimed at preserving tooth structure, improving longevity, and enhancing esthetics in restorative dentistry. Key trends in this market include the increasing use of tooth-colored composite resins, glass-ionomer cements, and ceramic materials for direct and indirect restorations that offer excellent bond strength, wear resistance, and natural appearance while minimizing the need for invasive tooth preparation and preserving tooth vitality. Moreover, there is a trend towards digital impression systems, chairside milling units, and CAD/CAM technology that enable same-day fabrication of custom restorations, including inlays, onlays, and crowns, with precise fit, minimal chairside time, and reduced laboratory costs compared to conventional fabrication techniques. Additionally, there is a growing emphasis on adhesive dentistry principles, including enamel preservation, marginal integrity, and bioactive restorative materials, that promote long-term restoration success and minimize the risk of secondary caries and restoration failure in clinical practice..
