Abstracts

The global Drugs of Abuse Testing market size is poised to register 4.56% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Drugs of Abuse Testing market By Product (Analyzers , Rapid Testing Devices , Consumables), By Sample, Saliva, Urine, Blood, Others), By End-User (Hospitals, Diagnostic Laboratories, Forensic Laboratories, Others).

The future of drugs of abuse testing is characterized by advancements in analytical chemistry, point-of-care testing, and substance use disorder management. Key trends include the development of rapid, sensitive, and multi-analyte testing platforms for the detection of illicit drugs, prescription medications, and emerging psychoactive substances in various biological matrices, including urine, saliva, blood, and hair. Moreover, there is a growing emphasis on portable and smartphone-compatible testing devices that enable on-site screening, remote monitoring, and real-time result reporting for law enforcement agencies, workplace drug testing programs, and addiction treatment facilities. Additionally, there is increasing integration of advanced technologies, such as mass spectrometry, immunoassays, and chromatography, into drugs of abuse testing workflows to improve analytical specificity, accuracy, and detection limits, supporting evidence-based decision-making and harm reduction strategies in substance abuse prevention and intervention efforts..
