Abstracts

The global Endobronchial Ultrasound Biopsy market size is poised to register 5.6% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Endobronchial Ultrasound Biopsy market across By Product (Biopsy Forceps, Cytology Brushes, Biopsy Needles, Transbronchial Aspiration Needles, Spray Catheters, Others), By Application (Cancer Diagnosis, Infection Diagnosis, Others)

With the increasing prevalence of lung cancer and the growing demand for minimally invasive diagnostic techniques that offer high diagnostic yield and accurate staging of mediastinal and hilar lymphadenopathy, there is a rising adoption of EBUS biopsy procedures that combine bronchoscopy with real-time ultrasound imaging, enabling guided tissue sampling and cytological analysis of suspicious lesions and lymph nodes in patients with lung nodules and mediastinal masses. Market growth is driven by factors such as expanding lung cancer screening programs, rising incidence of non-small cell lung cancer (NSCLC) and metastatic disease, and advancements in EBUS technology and needle design for improved tissue acquisition and diagnostic accuracy. Additionally, the expanding applications of EBUS in lung cancer diagnosis, staging, and treatment planning, as well as the development of endoscopic ultrasound-guided therapeutic interventions and molecular diagnostics for precision oncology and targeted

therapy selection, contribute to market expansion. Further, the emphasis on multidisciplinary collaboration, EBUS training and credentialing, and quality assurance in bronchoscopy units and interventional pulmonology programs, along with efforts to enhance patient safety and procedural efficiency through standardized protocols and procedural sedation guidelines, is expected to further accelerate market growth in the coming years.
