## **Abstracts**

The global Erectile Dysfunction market size is poised to register 8.36% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Erectile Dysfunction market By Type (Drugs, Devices, Others), By Age Group (Below 40 years, 40 to 60 years, Above 60 years), By Cause (Vascular Disorders and Diabetes, Neurological Disorders, Others), By End-User (Hospitals and ASCs, Clinics).

The future of erectile dysfunction (ED) treatment is influenced by advancements in medical technology, pharmacology, and personalized medicine. Key trends include the development of novel therapies that target the underlying causes of ED, such as vascular dysfunction, hormonal imbalances, and neurological disorders, offering more effective and tailored treatment options for patients. Moreover, there is a growing emphasis on the integration of lifestyle interventions, including exercise, diet, and stress management, as adjunctive therapies to improve overall sexual health and function in individuals with ED. Additionally, there is increasing exploration of regenerative medicine approaches, such as stem cell therapy and tissue engineering, aimed at restoring erectile tissue function and enhancing sexual performance in patients with refractory or severe ED. These trends reflect a shift towards a comprehensive and multidisciplinary approach to ED management, addressing both physiological and

psychological factors, and aiming to improve quality of life and sexual satisfaction for affected individuals..
