Abstracts

The global Eye Cancer Treatment market size is poised to register 5.3% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Eye Cancer Treatment market across By Treatment (Surgery, Radiation therapy, Laser Therapy, Cryotherapy, Chemotherapy, Bone Marrow Transplantation), By Type (Non-hereditary Retinoblastoma, Hereditary Retinoblastoma), By Stage (Intraocular Retinoblastoma, Extraocular Retinoblastoma)

With the increasing incidence of ocular malignancies and the growing demand for personalized and multidisciplinary cancer care, there is a rising adoption of eye cancer treatment modalities that offer targeted therapy, local tumor control, and vision preservation, enabling customized treatment approaches and improved oncologic outcomes in patients with intraocular and periocular tumors. Market growth is driven by factors such as expanding oncology market, rising awareness of ocular melanoma and retinoblastoma as rare cancers, and advancements in ophthalmic imaging and molecular diagnostics for early detection and treatment planning of eye tumors. Additionally, the expanding applications of eye cancer treatments in radiation therapy, photodynamic therapy (PDT), and surgical resection, as well as the development of

intraocular chemotherapy agents and targeted biologics for tumor-specific delivery and tumor microenvironment modulation, contribute to market expansion. Further, the emphasis on multidisciplinary tumor boards, collaborative research networks, and patient advocacy groups in eye cancer management and survivorship care, along with efforts to improve access to specialized ocular oncology services and clinical trials for innovative treatment approaches and vision-sparing therapies, is expected to further propel market growth in the coming years.
