Abstracts

The global Full-size Mobile C arms market size is poised to register 4.99% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Full-size Mobile C arms market By End-User (Hospitals, Clinics, Diagnostic Centers), By Application (Cardiac Procedures, Vascular And Neurological Procedures, Orthopedic Procedures, Others).

The future of full-size mobile C-arms is characterized by innovations in imaging quality, portability, and versatility, enabling real-time intraoperative imaging and guidance across various surgical specialties. With minimally invasive procedures becoming increasingly prevalent in modern healthcare, there is a growing demand for mobile C-arm systems that can provide high-resolution fluoroscopic and radiographic imaging in operating rooms, emergency departments, and intensive care units. Key trends include the development of flat-panel detector technology, digital image processing algorithms, and advanced visualization software for enhanced image quality and detail resolution. Additionally, there is a focus on compact and lightweight design, battery-powered operation, and maneuverability features such as motorized C-arm movement and rotating gantry angles to facilitate seamless integration into surgical workflows and patient care pathways. Moreover, there is ongoing research into augmented reality (AR) and navigation systems for surgical guidance and intraoperative visualization, enhancing procedural accuracy and patient safety in complex interventions..
