Abstracts

High levels of pipeline activity are being observed in Canavan Disease treatment during 2019. Clinical development activities are being undertaken by more than 5 companies including Orphan Star Therapeutics LLC, Pfizer Inc and others.

A Significant contribution to the Canavan Disease pipeline is being observed from emerging companies opting for new approaches to clinical development strategy. The early stage and late-stage Canavan Disease pipeline included 2 compounds, driven by increasing number of targeted therapies. Progress is being made in accelerating compounds into advanced stages. However, fluctuating trends are being observed in average duration across three phases.

Increased understanding of underlying causes of Canavan Disease condition and increased access to investments is encouraging growth of Canavan Disease drug pipeline. However, despite high levels of pipeline activity, increasing clinical trial costs and decreasing drug approval rates is requiring companies to focus more on understanding clinical development pipeline compounds.

The research study is structured to provide clear and actionable insights into Canavan Disease drug pipeline for companies to optimize spending levels by understanding competition, their pipeline products and prospect of further advances over the next few years.

The report addresses the discovery, research and pre-clinical stage active Canavan Disease therapeutic candidates. Further, drugs in clinical stage including phase 1, phase 2, phase 3 and pre-registration phases are also analyzed.

The current report examines the current Canavan Disease pipeline along with current development status, regulatory progress, mechanism of action, route of administration, collaborating companies, sponsors, molecule type, and research/discovery details.

In addition to drug overview, recent developments, the report also provides mechanism of action, Pre-clinical trial details and Clinical trial details for each of the drug candidates of Canavan Disease. Further, orphan drug status, fast track designation, grants awarded and other special status for Canavan Disease pipeline compounds are also included.

This study was produced independently by VPAResearch from our proprietary databases, primarily to assist users to develop in-depth understanding of 2019 Canavan Disease pipeline and formulate effective research and development strategies.
