Abstracts

High levels of pipeline activity are being observed in Nasal Polyps treatment during 2019. Clinical development activities are being undertaken by more than 10 companies including AnaptysBio Inc, F. Hoffmann-La Roche Ltd, GlaxoSmithKline Plc, Idorsia Pharmaceutical Ltd, Kyowa Hakko Kirin Co Ltd and others.

A Significant contribution to the Nasal Polyps pipeline is being observed from emerging companies opting for new approaches to clinical development strategy. The early stage and late-stage Nasal Polyps pipeline included 9 compounds, driven by increasing number of targeted therapies. Progress is being made in accelerating compounds into advanced stages. However, fluctuating trends are being observed in average duration across three phases.

Increased understanding of underlying causes of Nasal Polyps condition and increased access to investments is encouraging growth of Nasal Polyps drug pipeline. However, despite high levels of pipeline activity, increasing clinical trial costs and decreasing drug approval rates is requiring companies to focus more on understanding clinical development pipeline compounds.

The research study is structured to provide clear and actionable insights into Nasal Polyps drug pipeline for companies to optimize spending levels by understanding competition, their pipeline products and prospect of further advances over the next few years.

The report addresses the discovery, research and pre-clinical stage active Nasal Polyps therapeutic candidates. Further, drugs in clinical stage including phase 1, phase 2,

phase 3 and pre-registration phases are also analyzed.

The current report examines the current Nasal Polyps pipeline along with current development status, regulatory progress, mechanism of action, route of administration, collaborating companies, sponsors, molecule type, and research/discovery details.

In addition to drug overview, recent developments, the report also provides mechanism of action, Pre-clinical trial details and Clinical trial details for each of the drug candidates of Nasal Polyps. Further, orphan drug status, fast track designation, grants awarded and other special status for Nasal Polyps pipeline compounds are also included. This study was produced independently by VPAResearch from our proprietary databases, primarily to assist users to develop in-depth understanding of 2019 Nasal Polyps pipeline and formulate effective research and development strategies.

RESEARCH METHODOLOGY

Our integrated data reports are built through robust research methodology to ensure our users can build on the insights and data accuracy for their expansion plans. Both primary and secondary research methods are used with stringent quality checks at each stage to evaluate trends, analysis and forecasts.

Scope of the Research

Nasal Polyps Pipeline candidates-

Pre-clinical Phase: Discovery, research, pre-clinical

Early Phase: Phase 1 and Phase 2 Nasal Polyps drugs

Late phase: Phase 3 and in-approval Nasal Polyps drugs
