Abstracts

High levels of pipeline activity are being observed in Pruritus treatment during 2019. Clinical development activities are being undertaken by more than 30 companies including Albireo Pharma Inc, Amgen Inc, AntalGenics SL, AOBiome LLC, Asana BioSciences LLC and others.

A Significant contribution to the Pruritus pipeline is being observed from emerging companies opting for new approaches to clinical development strategy. The early stage and late-stage Pruritus pipeline included 32 compounds, driven by increasing number of targeted therapies. Progress is being made in accelerating compounds into advanced stages. However, fluctuating trends are being observed in average duration across three phases.

Increased understanding of underlying causes of Pruritus condition and increased access to investments is encouraging growth of Pruritus drug pipeline. However, despite high levels of pipeline activity, increasing clinical trial costs and decreasing drug approval rates is requiring companies to focus more on understanding clinical development pipeline compounds.

The research study is structured to provide clear and actionable insights into Pruritus drug pipeline for companies to optimize spending levels by understanding competition, their pipeline products and prospect of further advances over the next few years.

The report addresses the discovery, research and pre-clinical stage active Pruritus therapeutic candidates. Further, drugs in clinical stage including phase 1, phase 2, phase 3 and pre-registration phases are also analyzed.

The current report examines the current Pruritus pipeline along with current development status, regulatory progress, mechanism of action, route of administration, collaborating companies, sponsors, molecule type, and research/discovery details.

In addition to drug overview, recent developments, the report also provides mechanism of action, Pre-clinical trial details and Clinical trial details for each of the drug candidates of Pruritus. Further, orphan drug status, fast track designation, grants awarded and other special status for Pruritus pipeline compounds are also included.

This study was produced independently by VPAResearch from our proprietary databases, primarily to assist users to develop in-depth understanding of 2019 Pruritus pipeline and formulate effective research and development strategies.

RESEARCH METHODOLOGY

Our integrated data reports are built through robust research methodology to ensure our users can build on the insights and data accuracy for their expansion plans. Both primary and secondary research methods are used with stringent quality checks at each stage to evaluate trends, analysis and forecasts.

Scope of the Research

Pruritus Pipeline candidates-

Pre-clinical Phase: Discovery, research, pre-clinical

Early Phase: Phase 1 and Phase 2 Pruritus drugs

Late phase: Phase 3 and in-approval Pruritus drugs
