## Abstracts

The global Graft Versus Host Disease Treatment market size is poised to register 8.51% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Graft Versus Host Disease Treatment market across By Disease (Acute Graft-versus-Host Disease, Chronic Graft-versus-Host Disease), By Product (Corticosteroids, Monoclonal antibodies, Tyrosine kinase inhibitors, Others), By End-User (Hospital Pharmacies, Online Pharmacies, Retail Pharmacies).

The graft versus host disease (GVHD) treatment market is witnessing substantial growth driven by increasing incidences of hematopoietic stem cell transplantation (HSCT), advancements in immunosuppressive therapies, and rising awareness about GVHD management. GVHD is a potentially life-threatening complication that can occur after HSCT, where the transplanted donor cells attack the recipient's tissues. Factors such as the growing prevalence of hematologic malignancies, expansion of transplant centers, and improvements in diagnostic techniques for GVHD are driving market expansion. Additionally, advancements in GVHD treatment options, such as novel biologic agents, small molecule inhibitors, and cellular therapies, are further fueling

market growth. Moreover, increasing investments in research and development activities, collaborations between pharmaceutical companies and academic institutions, and initiatives to improve patient outcomes and quality of life are expected to drive market growth in the coming years. Furthermore, efforts to enhance early diagnosis, personalize treatment approaches, and reduce treatment-related adverse effects are likely to accelerate market expansion.
