## **Abstracts**

The global Heart Scan market size is poised to register 8.2% growth from 2024 to 2032, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Heart Scan market across By Type (Echocardiogram (ECG), Electron Beam Computed Tomography, Nuclear Heart Scan, Angiocardiology, Cardiac Catheterization, Coronary Arteriography, Others), By Indication (Coronary Arteries Blockage, Congenital Heart Disease, Blood Clots, Tumors, Others), By End-User (Medical Laboratories, Research Institute, Consulting Services, Investors, Others)

The Heart Scan market is experiencing rapid growth driven by the increasing prevalence of cardiovascular diseases, rising awareness about preventive health screenings, and technological advancements in cardiac imaging modalities. Heart scans, also known as cardiac computed tomography (CT) or coronary calcium scans, enable non-invasive assessment of coronary artery disease (CAD) risk by measuring

calcium deposits in the coronary arteries. The market is driven by the growing demand for early detection and risk stratification of CAD, as well as the need for accurate and cost-effective diagnostic solutions that complement traditional risk assessment tools. Further, advancements in CT technology, including dual-source CT and low-dose imaging protocols, are enhancing scan accuracy, speed, and patient comfort. By 2030, the market is expected to witness further growth as healthcare providers increasingly recommend heart scans for asymptomatic individuals with risk factors for CAD, driving adoption in primary care settings, wellness programs, and population health initiatives.
