Abstracts

Hepatitis D (HDV) Drug Development Pipeline Study, H2 2018 is the latest infectious disease publication with comprehensive information of Hepatitis D (HDV) pipeline products.

DISEASE OVERVIEW

Hepatitis D virus (HDV) infection is a liver disease, which occurs only in the presence of Hepatitis B virus. An estimated 5% of HBV patients are affected with HDV. Sexual transmission is the primary mode for spread of the infection though vertical transmission is also possible. Presence of Hepatitis D virus in serum is the main diagnosis for determining the infection.

As an estimated 15 million to 20 million people are affected with Hepatitis D Virus globally. Most affected population is from Africa, Asia Pacific, Middle East, South America and East Europe.

The total market value is estimated to be around \$2 billion worldwide. However, vaccines against Hepatitis B are the only solution for avoiding HDV infections. Accordingly, seven companies are actively developing Hepatitis D Virus infection pipeline compounds. Companies participating in the pipeline include Eiger BioPharmaceuticals Inc, F. Hoffmann-La Roche Ltd, Globeimmune Inc, MYR GmbH, Replicor Inc, Rodos BioTarget GmbH and SomaGenics Inc.
