## **Abstracts**

The global Herpes Infection Treatment market size is poised to register 7.24% growth from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Herpes Infection Treatment market across By Product (Therapeutics, Vaccine), By Type (Herpes Simplex, Herpes Zoster), By Drug (Acyclovir, Valacyclovir, Famciclovir, Others), By Route of Administration (Oral, Topical, Injection), By Herpes Vaccine, Herpes Simplex, Herpes Zoster), By Distribution Channel (Hospital Pharmacy, Retail Pharmacy, Online Pharmacy).

The herpes infection treatment market is witnessing notable growth, driven by increasing prevalence of herpes simplex virus (HSV) infections, advancements in antiviral therapies, and growing awareness of the clinical manifestations and complications associated with herpes infections. Herpes simplex viruses, including HSV-1 and HSV-2, are common pathogens responsible for oral and genital herpes infections, which can cause painful lesions, mucocutaneous ulcers, and recurrent outbreaks in affected individuals. Healthcare providers are utilizing a range of treatment options including antiviral medications such as acyclovir, valacyclovir, and famciclovir to

suppress viral replication, alleviate symptoms, and reduce the frequency and severity of recurrent herpes outbreaks. With a focus on early diagnosis, patient education, and comprehensive management strategies, dermatologists, infectious disease specialists, and primary care providers are striving to improve clinical outcomes, prevent disease transmission, and address the psychosocial impact of herpes infections on affected individuals. Additionally, advancements in drug delivery formulations, topical therapies, and immunomodulatory agents, along with expanding indications for antiviral drugs and emerging therapies such as therapeutic vaccines and gene editing technologies, are driving market expansion as stakeholders seek innovative and targeted approaches to managing herpes infections and improving the quality of life for individuals living with this prevalent and often stigmatized condition.
