## DISEASE OVERVIEW

Human Parainfluenza Virus 3 (HPIV-3) Infections is one of the four types of Parainfluenza that infect respiratory system of an individual. It is often associated with pneumonia and bronchiolitis, bronchitis. With limited or no treatment, the infected person recovers while persons with poor immunity systems are likely to develop fatal complications. Symptoms include running nose, chest pain and breathe related issues. Infants and young children are the most affected group. Unlike Flu that occurs in winter, parainfluenza infections can occur throughout the year.

As no vaccines or antiviral treatment options exist for treatment of HPIV 3 infections, several companies are working on HPIV-3 treatment. Currently, 3-V Biosciences, Inc., Amarillo Biosciences Inc, Ansun Biopharma Inc and Moderna Therapeutics Inc are actively participating in drug development for Human Parainfluenza Virus 3 (HPIV-3) Infections.
