## **Abstracts**

The global Impetigo Drugs market size is poised to register 7.5% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Impetigo Drugs market By Drug Class (Cephalosporins, Fusidane, Lincosamide, Penicillin, Quinolones, Sulfonamides, Tetracycline, Others), By Route of Administration (Oral, Topical), By Distribution Channel (Hospital Pharmacy, Online Pharmacy, Retail pharmacy).

The future of impetigo drugs is shaped by advancements in dermatology, infectious diseases, and antimicrobial therapy aimed at improving treatment outcomes, reducing antimicrobial resistance, and minimizing disease recurrence in individuals with impetigo, a common bacterial skin infection. Key trends include the development of novel topical and systemic antimicrobial agents, such as retapamulin, ozenoxacin, and novel antibiotics with unique mechanisms of action, which offer broad-spectrum coverage against *Staphylococcus aureus* and *Streptococcus pyogenes*, the primary pathogens implicated in impetigo, while minimizing the risk of resistance development and adverse effects. Additionally, the integration of adjunctive therapies, such as antiseptic washes, nasal decolonization, and wound care management, aims to reduce bacterial burden, prevent secondary infections, and promote faster healing of impetigo lesions, particularly in high-risk populations, such as children and individuals living in crowded or

unsanitary conditions. Moreover, efforts to optimize treatment guidelines, promote antimicrobial stewardship, and raise awareness about proper hygiene practices aim to reduce the transmission of impetigo, improve treatment adherence, and mitigate the spread of antimicrobial-resistant strains, ultimately improving clinical outcomes and public health outcomes for individuals affected by impetigo..
