Abstracts

The global Intermittent Catheters market size is poised to register 5.81% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Intermittent Catheters market By Product (Uncoated Intermittent Catheter, Coated Intermittent Catheter), By Indication (Urinary Incontinence, Surgery, Spinal Cord Injury, Others), By Category (Male Length Catheter, Kids Length Catheter, Female Length Catheter), By End-User (Hospitals, Medical Research Centers, Ambulatory Surgical Centers).

The future of intermittent catheters is influenced by advancements in materials science, design innovation, and patient-centered care approaches aimed at improving comfort, convenience, and reducing the risk of complications. Key trends include the development of hydrophilic and antibacterial coatings on catheter surfaces to reduce friction, enhance lubrication, and minimize the risk of urinary tract infections (UTIs). Additionally, there is a growing emphasis on compact and discreet catheter designs that offer portability and ease of use for individuals managing urinary retention or neurogenic bladder dysfunction. Moreover, advancements in catheter insertion techniques,

including the use of insertion aids and educational resources, are empowering patients to perform self-catheterization safely and effectively, promoting independence and quality of life..
