Abstracts

The global Internal Urinary Catheters market size is poised to register 5.61% growth (CAGR) from 2024 to 2030, presenting significant growth prospects for companies operating in the industry. The industry study analyzes the global Internal Urinary Catheters market By Product (Indwelling catheters, Intermittent catheters), By End-User (Healthcare centers, Hospitals, Home care).

The future of internal urinary catheters is characterized by a focus on infection prevention, patient comfort, and catheter-associated complications. Key trends include the development of antimicrobial and antiseptic catheter materials and coatings to reduce the risk of catheter-associated urinary tract infections (CAUTIs). Additionally, there is a growing emphasis on catheter design features such as tapered tips, smooth insertion surfaces, and hydrophilic coatings to minimize trauma during catheterization and improve patient comfort. Moreover, advancements in catheter securement devices and stabilization techniques are reducing the risk of catheter migration and dislodgement, enhancing patient safety and reducing the need for catheter reinsertion..
